20MM MOTIVI WORKTOP

The 20mm Motivi Worktops are providing the solution for one-of-kind worktops, suitable for both residential and commercial applications.

Motivi Worktops are made of 20 mm HMR particle board and are manufactured with a modern vertical profile of 2.5 mm radius. Thanks to the latest European innovative technology, the particle board is sliced to give the vertical edge a strong 2.5 mm thickness with a 2.5 mm radius for impact resistance.

The Motivi Gloss Laminate is treated with an Aluminium Oxide Overlay, this protects the laminate against surface wear, making it durable and highly resistant to impact, heat, scratching, chipping and cracking.

In comparison to granite or engineered stone, Nikpol's 20mm Motivi Gloss Worktops is an affordable luxury that is much easier to maintain.
